

## CS Topics: Mobile Application Development

Unit 1 Project: Connect 4

*\*ALL ITEMS ARE SUBJECT TO CHANGE\**

---

### Part 4: Determine a Winner (1 Day, 10 Points)

- Write logic to check for a winning condition when a checker is placed.  
Make sure your code can detect horizontal, vertical, and diagonal wins.
- Notify the user that the game is over (Name of Winner or Tie)

Here is the detailed rubric for this section:

| <b>Part 4: Determining a Winner Rubric</b>                                                          |            |
|-----------------------------------------------------------------------------------------------------|------------|
| <b>Task</b>                                                                                         | <b>PTS</b> |
| Checks for horizontal wins correctly.                                                               | <b>2</b>   |
| Checks for vertical wins correctly.                                                                 | <b>2</b>   |
| Checks for diagonal wins correctly.                                                                 | <b>2</b>   |
| Displays winning messages or an indicator when a player wins.                                       | <b>2</b>   |
| Ends gameplay appropriately after a win or draw (makes a “restart button active to reset the board) | <b>2</b>   |
| <b>TOTAL</b>                                                                                        | <b>10</b>  |
